Model-Based Requirements Engineering

demonstrates how the requirements engineering activities are integrated into the OPM-based conceptual system model which evolves throughout the system its life cycle. An evaluation of this work is also presented in this section. Section 13.6 concludes the chapter with some observations on the utility of this mechanism.

13 Model-based Requirements Engineering Framework for

in the environment that may require the software to dynamically adapt at run time in order to maintain high-level goals. This process results in a goal-based requirements model that explicitly captures where adaptations are needed, documents the level of exibility supported during adaptation, and takes into account enviromental uncertainty.
