### **OZONE SPARGE TECHNOLOGY FOR GROUNDWATER REMEDIATION**

Hydraulic conductivity, symbolically represented as  $K$ , is a property of vascular plants, soils and rocks, that describes the ease with which a fluid (usually water) can move through pore spaces or fractures. It depends on the intrinsic permeability of the material, the degree of saturation, and on the density and viscosity of the fluid. Saturated hydraulic conductivity,  $K_{sat}$ , describes water ...

### **Hydraulic conductivity - Wikipedia**

A new object-oriented program and underlying framework called MODFLOW 6 was developed to provide a platform for supporting multiple models and multiple types of models within the same simulation. This version of MODFLOW is labeled with a "6" because it is the sixth core version of MODFLOW to be released by the USGS.

A comprehensive FAQ Manual on Groundwater authored by Dr Mihir Kumar Maitra narrows down the existing knowledge gaps amongst the common groundwater users. The most popular FAQs are listed below. Please click on a topic to view more detailed information: Basic information on groundwater

### **Frequently asked questions (FAQ) on Groundwater**

Shale gas is mostly composed of methane. Methane is "natural gas" and is the gas used to generate electricity and for domestic heating and cooking. Shale gas is produced using technologies developed since the 1980s that enable gas to be recovered from rocks (mostly shale) which were previously considered to be unsuitable for extracting gas.

### **Shale gas | Energy | Our research - British Geological Survey**

Existing studies on the impacts of climate change on groundwater recharge are either global or basin/location-specific. The global studies lack the specificity to inform decision making, while the local studies do little to clarify potential changes over large regions (major river basins, states, or groups of states), a scale often important in the development of water policy.

### **Implications of projected climate change for groundwater**

The combined concentration of  $^{226}\text{Ra}$  +  $^{228}\text{Ra}$  is often  $>5$  pCi/L (the USEPA MCL value for Ra) in groundwater from the Cambrian-Ordovician aquifer. Water-quality characteristics that favor the mobility of radium include anoxic, Fe-reducing conditions and increased mineralization.

## **Guidelines on - Food and Agriculture Organization**

Arsenic poisoning is a medical condition that occurs due to elevated levels of arsenic in the body. If arsenic poisoning occurs over a brief period of time symptoms may include vomiting, abdominal pain, encephalopathy, and watery diarrhea that contains blood. Long-term exposure can result in thickening of the skin, darker skin, abdominal pain, diarrhea, heart disease, numbness, and cancer.
