A bridge is a fixed dental restoration (a fixed dental prosthesis) used to replace one or more missing teeth by joining an artificial tooth definitively to adjacent teeth or dental implants. A bridge will span the area where teeth are missing. They are attached to the natural teeth or implants that surround this space. The natural teeth or implants which support the bridge are called abutments.

The term was first reported in a 2004 USA Today article describing the effect being made on trial jurors by television programs featuring forensic science.

I don't limit the history to drugs—I want to know anything you're allergic to, be it environmental, food, insects, or anything else. Allergies can create true therapeutic challenges: We can't dismiss any allergy ...

I had all 4 of my (non-impacted) wisdom teeth extracted using the aforementioned Carbocaine 3% Plain. I was a bit concerned that I wouldn't be numb enough, and, as such, I did discuss this at great length with my dentist, and he assured me the Carbocaine would be enough for these extractions.
