â€œMost of it is completely inhospitable and hostile to lifeâ€” is a general objection to a general teleological argument on the cosmological level (like how the argument from bad design is an objection to a general teleological argument on the biological level).

### **The Fine-Tuning Argument, Generalized**

The human brain is the central organ of the human nervous system, and with the spinal cord makes up the central nervous system. The brain consists of the cerebrum, the brainstem and the cerebellum. It controls most of the activities of the body, processing, integrating, and coordinating the information it receives from the sense organs, and making decisions as to the instructions sent to the ...

Having previously established that lonely people suffer from higher mortality than people who are not lonely,

researchers are now trying to determine whether that risk is a result of reduced social resources, such as physical or economic assistance, or is due to the biological impact of social isolation on the functioning of the human bodyâ€• (UCLA News Release, September 13, 2007).

The cerebellum (Latin for "little brain") is a major feature of the hindbrain of all vertebrates. Although usually smaller than the cerebrum, in some animals such as the mormyrid fishes it may be as large as or even larger. In humans, the cerebellum plays an important role in motor control. It may also be involved in some cognitive functions such as attention and language as well as in ...
