The study investigates materials procurement measures for construction waste mitigation.   Focus group discussions, statistical analysis and structural equation modelling were used.

### **Waste-efficient materials procurement for construction**

Latent growth modeling is a statistical technique used in the structural equation modeling (SEM) framework to estimate growth trajectories. It is a longitudinal analysis technique to estimate growth over a period of time. It is widely used in the field of behavioral science, education and social science.

### **Latent growth modeling - Wikipedia**

In econometrics, a structural break, or structural change, is an unexpected shift in a time series that can lead to huge forecasting errors and unreliability of the model in general. This issue was popularised by David Hendry, who argued that lack of stability of coefficients frequently caused forecast failure, and therefore we must routinely test for structural stability.

Articles. 30 Dec 2011. NURBS and CAD: 30 Years Together. Dmitry Ushakov. In the outgoing year engineering celebrates a remarkable anniversary –“ thirty years of industrial use of Non-Uniform Rational B-Spline (NURBS) for modeling 3D curves and surfaces. In August 1981 an American aircraft concern Boeing proposed to embody NURBS in IGES industrial standard.
