

variational models and methods pdf

Variational Bayesian methods are a family of techniques for approximating intractable integrals arising in Bayesian inference and machine learning. They are typically used in complex statistical models consisting of observed variables (usually termed "data") as well as unknown parameters and latent variables, with various sorts of relationships among the three types of random variables, as ...

An autoencoder is a type of artificial neural network used to learn efficient data codings in an unsupervised manner. The aim of an autoencoder is to learn a representation (encoding) for a set of data, typically for dimensionality reduction. Along with the reduction side, a reconstructing side is learnt, where the autoencoder tries to generate from the reduced encoding a representation as ...

A Fast Learning Algorithm for Deep Belief Nets 1531 weights, w_{ij} , on the directed connections from the ancestors: $p(s_i = 1) = \frac{1}{1 + \exp(-\hat{b}_i - \sum_j w_{ij} s_j)}$, (2.1) where b_i is the bias of unit i . If a logistic belief net has only one hidden layer, the prior distribution over the hidden variables is factorial because
